

Release Note

Release Note – 2026-02-02

Highlights: Security, control, and new LLM support

New Features:

- Support End-user OAuth for User-defined Tools (API, Python, MCP) - User-defined tools now support end-user OAuth, enabling per-user authorization and secure access to third-party systems. This unlocks more enterprise integration scenarios. **#Tooling #Security #OAuth**
 - Human-in-the-Loop Tool Execution Confirmation Card - You can now require human confirmation before executing tools. This is especially useful for high-risk or high-cost actions, improving safety, compliance, and operational control. **#HumanInTheLoop #Safety #Governance**
 - UI Improvement for Crediting Contributors in the Official Tool Market - The Official Tool Marketplace now clearly displays contributor information, helping recognize authorship and encourage ecosystem contributions. **#Tools #UX**
 - GPT-5.1 & GPT-5.2 Integration - The agent platform now supports GPT-5.1 and GPT-5.2, enabling stronger reasoning, improved conversational quality, and enhanced agent orchestration capabilities. **#LLM #Agent #GPT**
-

Release Note – 2026-01-14

Highlights: More accurate usage tracking across workflows

New Features:

- Add Workflow Usage to Total Tool and Knowledge Base Usage - Tool and Knowledge Base usage generated within workflows is now included in total usage calculations. This ensures more accurate cost tracking, quota management, and usage analytics across the platform. **#Usage #Cost #Workflow**
-

Release Note – 2026-01-06

Highlights: Workflow observability improvements

New Features:

- Provide Detailed Debug Information for Each Node in Batch Processing Sub-Canvases - You can now view detailed debug information for every node within batch processing sub-canvases. This greatly improves observability and troubleshooting efficiency when running large-scale or complex batch workflows. **#Workflow #Debugging #Observability**
-

Release Note – 2025-11-19

Highlights: Multimodal capabilities in workflow

New Features:

- Enable Sending Attachments to LLM-Powered Nodes - Now you can send images, PDFs, or audio files to LLM-Powered Nodes (such as LLM, Classifier, Intent Detector, Variable Extractor, and Released Agent) using a file variable, base64 encoding, or a URL. This allows your workflow to handle multimodal tasks seamlessly. **#Workflow #Productivity**
-

Release Note – 2025-11-12

Highlights: Better dataservice integration, clearer official tools UX, and builtin data/code capabilities.

New Features:

- RawSQL Data Service – Backend support for Data Service RawSQL APIs with serverside header handling. **#Integration #Tools**
- Official Tool Contribution Credits – Show contribution credits for teams and users in Official Tool UI. **#Tools #UX**
- Data Analytic & Code Interpreter Skill – *Currently in Beta, limited user-based release.* Builtin data analytics and codeinterpreter features (support large data file upload, Google Sheet, Data Suite Data Service, able to query, aggregate, run prediction model, visualize data and more). **#AgentDev #Data**
- Official Tool Renames – Rename official tools to clearer, userfriendly names (e.g., “Search Wikipedia”). **#Tools #UX**

- Integrate gpt-oss-20b and gpt-oss-120b LLMs - Provide more LLM choices with lower cost and optimized performance for agentic tasks and instruction following. **#AgentDev #Modeling**
-

Release Note – 2025-11-03

Highlights: Stronger access control and initial workflow + live app modules. Revamp multiple agent development pages and enhance team management with Workspace and Budget.

New Features:

- RBAC & Workspace – Introduce RBAC with least privilege by default to enhance platform security and Workspace under Team for easier and safer collaborations. **#Security #Governance**
 - Workflow Phase 1 – Launch Workflow v1: CRUD, canvas nodes, variables, preview/debug and integrations. **#Workflow #Productivity**
 - Introducing Smart Application – Agent and Workflow is now called Applications. **#App**
 - Live App Integration Channel – Releasing application is now easier: enable Live App and share directly to your end user securely and conveniently. Live App offer all native features of agent in Smart Platform, such as large and multiple file attachment, displaying markdown table, agent response feedback and more in the future. No more limitation of SeaTalk. **#AgentDev #UX #Live-App**
 - Introducing Budget – Formally known as Project. Budget represents the AI cost, allow team admin to control and distribute the AI across workspaces. **#Cost #Governance**
-

Release Note – 2025-10-29

Highlights: KB ingestion isolation, more resilient tools, and new log source support.

New Features:

- Perteam KB Upload Queues – Provide independent KB ingestion queues per team. **#KnowledgeBase #Scalability**
 - Tool Timeout & Error Handling – Improve tool timeout handling and preserve original error codes/messages. **#Tools #Reliability**
 - ShopeePay Log Source – Add ShopeePay log platform as a supported log source for SMART tools. **#Tools #Integration**
-

Release Note – 2025-10-22

Highlights: Agent discoverability and multiagent / session UX bug fixes.

New Features:

- Agent Gallery Promotion – Enable promotion of usercreated agents into the Agent Gallery. **#AgentDev #UX**
 - Session History Search Fix – Make message/session ID searches work across pages. **#FE #UX**
 - Multiagent Canvas Fix – Fix canvas line direction state so connections persist correctly after save. **#MultiAgent #UX**
-

Release Note – 2025-10-15

Highlights: Ruledriven UX/backend improvements.

New Features:

- Autodetect invoke_llm – Automatically detect when a node should invoke the LLM (no manual flag). **#RuleDriven #AgentDev**
-

Release Note – 2025-10-08

Highlights: Knowledge Base UX polish and tool runtime/isolation enhancements.

New Features:

- Google Drive Filetype Filter – Allow filtering Google Folder imports by file type (e.g., slides). **#KnowledgeBase #Integration**
- Public KB Team Column – Show team name in Public KB list for easier discovery. **#KnowledgeBase #UX**
- KB Test: Show File Name – Display source file name on KB test page for retrieved chunks. **#KnowledgeBase #Debugging**
- Structured KB Chunks – Present structured keyvalue headers for userdefined KB chunks. **#KnowledgeBase #Retrieval**
- Hive Table Filter – Add Hive Table as a selectable datasource filter option. **#KnowledgeBase #Integration**

- FAQ Knowledge Base AddRow UX – Move the “Add row” button in FAQ Knowledge Base to the top for long tables. **#KnowledgeBase #UX**
 - Tool Isolation – Introduce containerization/isolation for tool execution to protect resources. **#Tools #Security**
-

Release Note – 2025-10-01

Highlights: Integration & authentication migrations, improved parsing and agent security.

New Features:

- SeaTalk Threading Improvements – Improve privatemessage threading (remove date from thread IDs; adjust timeout). **#Seataalk #Integration**
 - OpsGateway Migration – Migrate UIC APIs to OpsGateway for authentication compliance. **#API #Security**
 - PDF Parser Upgrade – Improve PDF parsing (inhouse +GPU or adopt Compass) for higher accuracy. **#AgentDev #KnowledgeBase**
 - Restrictive Python for Rule-Driven Agent – Upgrade from Python to Restrictive Python for rulebased agents to prevent config/key leakage. **#Security #AgentDev**
 - Gmail & Calendar Tools – Add official Read/Write tools for Gmail and Google Calendar. **#Tools #Integration**
-

Release Note – 2025-09-24

Highlights: Ruledriven UX polish, runtime library support and MCP registration auth.

New Features:

- RuleDriven Guidelines – Add ineditor guideline placeholders to help users write effective rules and logic. **#RuleDriven #UX**
 - SciPy & scikitlearn Runtime – Add SciPy and scikitlearn to the Python tool runtime. **#Tools #DataScience**
 - UnsavedChange Modal Fix – Make Esc/close dismiss the dialog without discarding changes. **#FE #UX**
 - Code Editor Resize UX – Improve code editor height adjustment (clearer expand/collapse). **#RuleDriven #UX**
 - MCP Registration Auth – Support JWT/auth when registering MCP servers on Smart platform. **#Tools #Security**
-

Release Note – 2025-09-17

Highlights: Enduser tool auth and model reasoning controls.

New Features:

- Enduser Auth for Official Tools – Support enduser authentication and external credential management. **#Tools #Security**
 - gpt5 Reasoning Params – Expose gpt5 reasoning parameters (effort & verbosity) in model settings. **#AgentDev #Modeling**
 - Gemini Flash Toggle – Add Gemini 2.5 “Flash Thinking” toggle with configurable thinking budget. **#AgentDev #Modeling**
-

Release Note – 2025-08-29

Highlights: Strengthens agent evaluation & scheduling, improves KB retrieval controls, and expands tool ecosystem with secure end-user authentication and Text2SQL.

New Features:

- Agent Evaluation – Build an end-to-end evaluation system for Smart agents. **#AgentDev #Governance**
 - Scheduled Trigger – Run agents on configurable schedules with recurrence rules & time zones. **#AgentDev #Automation**
 - Chunking Strategy Options – Configure chunking (preserve tables/images, order sorting, delimiter, header, semantic). **#KnowledgeBase #Retrieval**
 - K Parameter in KB Settings – Control RRF retrieval smoothing with configurable K. **#KnowledgeBase #Retrieval**
 - KB Embedding per Team Budget – Embedding cost now deducted from each team’s budget. **#KnowledgeBase #Cost**
 - End User Auth for Official Tools – API and MCP tools now support secure end-user authentication. **#Tools #Security**
 - Text2SQL Official Tool – New UI + REST API endpoints for Text2SQL, plus secure token lifecycle management. **#Tools #Integration**
 - Expanded Official Tools – Enhancements for Jira, Confluence, Google Docs, Web Crawler. **#Tools #Integration**
 - MCP Server Smart_Seataalk_ID – Retrieve smart_seataalk_id in MCP server code. **#Tools #Seataalk #Integration**
 - SeaTalk UX Enhancement – Auto-bind agent to newly added Seataalk bot. **#Seataalk #UX**
 - Lower Temperature Guide – Provide guidance for developers experimenting with temperature control. **#AgentDev**
 - Multiple Confluence/Jira Domains – Support connecting multiple domains for enterprise integrations. **#Integration #UserProfile**
-

Release Note – 2025-08-15

Highlights: Major release focused on determinism in AI, KB flexibility, cost transparency, and multi-agent collaboration.

New Features:

- Rule-Driven Mode for deterministic AI – Agents now generate executable code exactly from prompts. **#AgentDev #Determinism**
- Tool Output Param Auto Parse – Auto-detect tool output parameters from test result to reduce setup errors. **#AgentDev #Determinism**
- Multi-Agent Context Sharing – Pass user attachments and query context across agent nodes. **#MultiAgent #UX**
- Cost Awareness & Alerts – Show message-level costs, alert owners of abnormal usage, and calculate higher-level reports. **#Cost #Governance**
- Advanced KB Document Handling – Exclude sheets in spreadsheets, custom chunking strategies, multi-link upload, batch delete, regex crawler exclusions. **#KnowledgeBase #Governance**
- Structured Output Generation – Ensure predictable machine-usable responses. **#AgentDev**
- Debug & Traceability – Show document & chunk metadata in Preview/Debug view. **#AgentDev #KnowledgeBase**
- Typing Indicator in Seataalk – Show “Agent is typing...” for reassurance. **#UX #Seataalk**
- Project Quota Permissions – Stricter SQP governance (view/manage limited to members/admins). **#Governance**
- Centralized Feedback Portal – Submit feature requests/bug reports in one place. **#UX #Governance**
- Persist Debug Sessions – Retain chat history and formatting after clearing. **#AgentDev**
- /record Command in Seataalk – Summarize threads directly into KB. **#KnowledgeBase #Seataalk**
- Expanded Official Tools – More tools available out-of-the-box. **#Integration #Tools**
- Download Uploaded Python Scripts – Retrieve .py files for reuse. **#AgentDev #Tools**

(hidden: SPX email integration, MCP server security, save-in-popup confirm, advanced LLM param tuning, small UI/UX polish)

Release Note – 2025-07-15

Highlights: Patch release improving KB governance, tool discoverability, and developer APIs.

New Features:

- Hyperlink to Project Quota SOP – Easier governance reference. **#Governance**
- Recommendation Labels – Tools now tagged with recommendations to find faster. **#UX #Tools**
- Linked Accounts in Tools – Agent tools can use linked accounts. **#Integration #Tools**
- get_message API – Full message history, including interrupt messages. **#AgentDev #API**

(hidden: Hardcoding max agent call iterations for some agent groups)

Release Note – 2025-06-27

Highlights: A scale & governance release for the Knowledge Base, with major enhancements in feedback collection, cost analysis, and official tool expansion.

New Features:

- KB Auto-sync – All sources stay updated automatically. **#KnowledgeBase #Automation**
 - Improved KB upload performance – Supports massive-scale document ingestion. **#KnowledgeBase #Scalability**
 - Edit KB documents – Update ownership, frequency, and structures. **#KnowledgeBase #Governance**
 - Feedback Collection – End users/editors can submit structured reports for future evaluation features. **#UX #Governance**
 - Cost Analysis Dashboard – Track and optimize compute/token consumption. **#Cost #Governance**
 - API Token Cost Return – API responses include token usage/cost. **#Cost #API**
 - Python Debug Info – View runtime debug logs for packages/scripts. **#AgentDev #Debugging**
 - Official Tool Expansion – Jira, Confluence, Data Suite Data Service, Google Sheets. **#Integration #Tools**
 - Streamable HTTP for MCP – Updated transport protocol. **#Infrastructure**
 - Python System Variables – Session ID & User ID available in Python package tools. **#AgentDev**
 - EE Zone Deployment – Enterprise isolation option. **#Governance #Infrastructure**
 - Linked Accounts – Multi-tenant identity management. **#Integration**
 - SEH Article Upload – Direct ingestion into KB. **#KnowledgeBase #Integration**
 - Hive Table Upload – Add Hive tables as KB sources. **#KnowledgeBase #Integration**
 - Inline Link Attachments – Scrape and attach inline assets. **#KnowledgeBase**
 - Manual KB File Reload – On-demand refresh. **#KnowledgeBase**
 - Enhanced Single Agent UI – Clearer layout, status visibility. **#UX**
 - UI/UX Enhancements – Agent edit & session history polish. **#UX**
-

Release Note – 2025-05-16

Highlights: Initial release delivering Smart' s foundation for Knowledge Base, agent development, and observability.

New Features:

- Core Knowledge Base ingestion and retrieval. **#KnowledgeBase**
- Foundational Agent framework with tool integrations. **#AgentDev #Tools**
- Base UI for single-agent view. **#UX**
- Initial cost visibility and session tracking. **#Cost**
