

Smart Platform FAQ

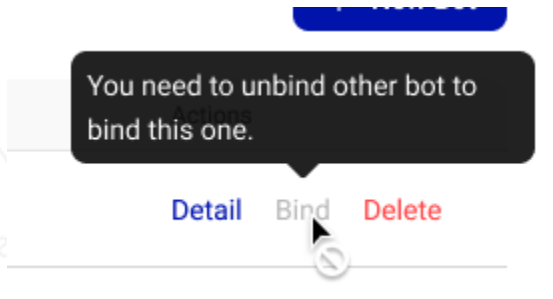

- Question: I am existing Smart user, how do I migrate the agent from current Smart platform to the new platform?
- Question: Is Smart slated to be the primary platform for creating Agents in the short to medium term? Will other platforms be restricted from end-user access once Smart is implemented
- Question: Why can't I find my old agent in the v1 Smart Platform
- Question: How can I submit request or feedback?
- Question: How can I get access to Smart?
- Question: Can i make an live agent go back to draft?
- Question: I need to provide report about users using my agent or for my team to analyse agent usage, performance and feedback, how can I get the data?

Question: I am existing Smart user, how do I migrate the agent from current Smart platform to the new platform?

Answer: Agent will be migrated by Smart team. After the migration, there exists 2 versions of the agent in both old and new Smart platform. Depends on how agent is being used, user can follow the steps below to finish the migration:

1. If agent is integrated with SeaTalk: Update the SeaTalk bot callback URL to the new agent callback URL

- Locate "Integration" tab in "Agent Development Page".
- Locate the record that has "Bind" status:

- Copy its "Callback URL" and replace it in SeaTalk bot setting

SeaTalk Bot

Integration Name	SeaTalk ID	Callback URL	Add
DI PRD Master	12345678	https://space.shopee.io/apis/gptsre/v1/orchestrator/seatal...	202
DI PRD Master	12345678	https://space.shopee.io/apis/gptsre/v1/orchestrator/seatal...	202

- For updating SeaTalk setting, please refer to [SeaTalk user guide for updating event callback](#).

2. If agent is integrated via API: You need to update your API endpoint URL, has ID and Key to the new agent's

- Locate "Integration" tab in "Agent Development Page".
- Locate "Agent as API" in left side panel.

SeaTalk Bot

Agent as API

Agent as API

Endpoint Status

☐ Inactive

Invoke Agent

- Endpoint Status should be "Active", locate base URL, Hash ID and Endpoint Key from the detail section and update accordingly in your application.

Agent as API

Endpoint Status

☒ Active

Endpoint deployments now use a endpoint_deployment_key to authenticate. Basic authentication from before is deprecated but still supported until further notice, please switch to using endpoint_deployment key as soon as possible.

Anchor item

Note: It's recommended to update your downstream of Smart agent as soon as possible and directly use our new platform to update the agent. Any update to the agent in the old platform won't be sync automatically or vice versa.

Question: Is Smart slated to be the primary platform for creating Agents in the short to medium term? Will other platforms be restricted from end-user access once Smart is implemented

Answer:

Yes, Smart will be the official platform, where we will aggregate tools as our engineers build up applications on it. It will be the official middle layer.

Tools such as "get data from data suite", "get log from log platform", "web crawler", will be built as official tools. Over time, more applications and integrations will be added such as integration with SPACE, Jira, Confluence, SeaTalk, Google Drive, Container Platform, etc.

Other "platforms" which were built earlier (before we declared Smart to be the official one) would probably still exist, but technically we will treat those as part of its original solution, rather than a platform that serves across the functions.

Question: Why can't I find my old agent in the v1 Smart Platform

Answer:

Old Smart platform didn't have a record of owner or creator of agent, hence, we have conduct a case by case mapping from a folder in old version to a team in new version. This process might have some discrepancy. If you cannot find your agent in the new team in v1, please feedback to us here: <https://docs.google.com/spreadsheets/d/1L9X6zx575cmj2169MSBKJ5fHnnkf7N9FaybSzkrcQ/edit?gid=204848368#gid=204848368>

Question: How can I submit request or feedback?

Answer:

You can submit product feedback or feature requests for Smart via POP (Product Operations Platform). Here's how:

1. Go to this link: <https://pop.shopee.io/llm-request/create?mainProductLine=Smart>
2. Fill out the form with your feedback or request details.
3. Submit the form, and the Smart platform team will review your submission.

Question: How can I get access to Smart?

Answer:

If you see an "Access Coming Soon" page when trying to access Smart, it means you are not in the whitelist yet. To get access:

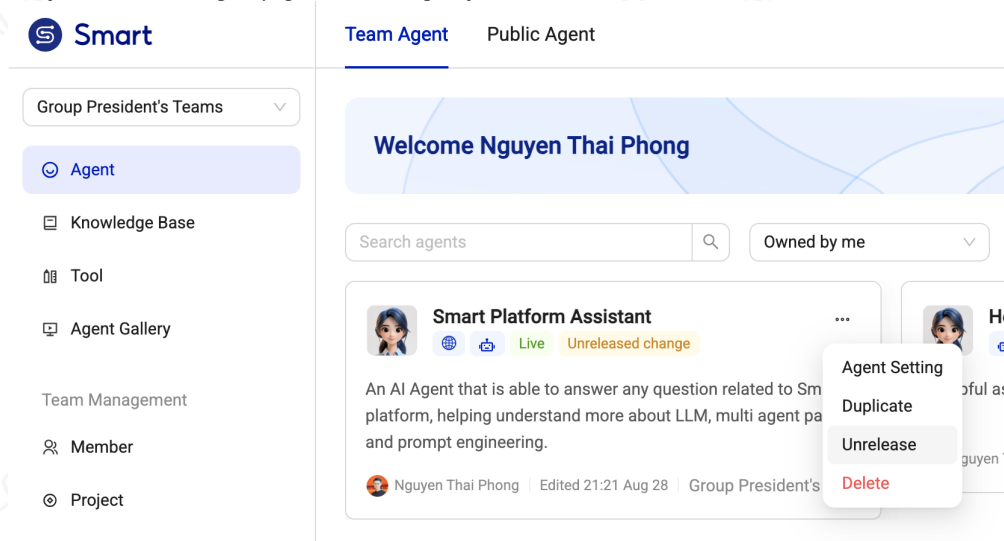

1. Click on the "Register Interest" button on the page.
2. Your registration will be collected, and you will be added to the whitelist in batches.
3. Since Smart is still in the early access phase, only whitelisted users can use it. After the full release, everyone will have access without needing to be whitelisted.

If you have a special case and need urgent access, you can contact the BPM: [ziyang.wu@shopee.com] for assistance.

Question: Can i make an live agent go back to draft?

Answer:

Yes, you can. Head to Agent page >> find the agent you want to unrelease >> Click on "..." >> Unrelease

Question: I need to provide report about users using my agent or for my team to analyse agent usage, performance and feedback, how can I get the data?

Answer:

- For your own agent, currently we provide offline data via Data Suite Dashboard Download Board (Data is updated with T-1 delay). You can apply for access here: <https://datasuite.shopee.io/dashboard/dashboard/d2f13695-5eb0-44a5-a5a4-fea994ee0a29/normal>
- If you are cost PIC or LLM champion who needs to Smart applications data for your team, you can use this dashboard: <https://datasuite.shopee.io/dashboard/dashboard/77c7aba9-27f9-4c55-9ecf-9b74de62eeee/normal>
 - Dashboard has data access control. Choose and apply access only for your team.

- If you need a hive table for report automation, you can raise a request via POP ticket: <https://pop.shopee.io/llm-request/create?mainProductLine=Smart>
-
